Erratum v3.7**

N°	PROBLEM / PRINTING MISTAKE OR ERROR / NEW INFO	N° PAGE	SOLUTION TO SOLVE THE PROBLEM IN THE NEXT PRINT
1	The "W" code that has been added on page 45 for additional washers have been forgotten on pages 71 & 73.	71-73	Add in next edition
2	The typical markets for CMM micro-connectors that are defence, aerospace, railway, naval, medical & energy are not visible in the catalogue. Page 6 that cites the same level of information as on page 2 should be reviewed. Also the mention "up to 2 500 cycles" is false as the correct information is up to 5 000 cycles as stated on page 5.	6	Add market information & pictures that are representative and shown online
3	We do not show the 2D drawings for the female CMM100/200 connectors and state that the 90° SMT connector is available upon request. This has to be modified as the connector is available in standard.	25	Modify with the correct drawings
4	The 3D images of CMM connectors on these pages always show strain relief straps mounted on the housings. However, strain relief straps are supplied with all male CMM100/200 mounted with latches (L or FL) except for Y and YL terminations.	20-21	Clarify this by a note on page bottom in the next edition.
5	Special contacts for card edge connectors (30-1500-12) on pages 79 (for CMM220 series) and 80 (for CMM320 series) are not enough visible inside the catalogue.	79-80	Mention in the index page 123 under the chapters CMM220 & CMM 320.
6	The PCB layout for male 90° SMT contacts for CMM320 series P/N 30-1500-12 shows a wrong title for the PCB layout. It should be 30-1500-12 and not 30-1500-CMM.	80	Replace
7	Cable instructions are correct but need to be updated through new information that will be available for the next print.	114-115	Update
8	The connectors shown on page 125 should be updated with new pictures and the texts can be reviewed with new information available for the next print. A QR code can be added to implement the online access.	125	Update
