

NICOMATIC

Telecom-Datacom applications in the loop (2020/10/27 12:09:01 pm)

Nicomatic is more & more present thru this sector where signal integrity plays an important role.

The telecom/datacom market sector includes enterprise & wireline network equipments, wireless networks, subscriber equipments, and cable/multiservice operator equipments, antennas & radars, amplifiers... The driving force in this market is the explosion in the volume of Internet traffic over the last 10 years. This growth has been driven by an increasingly connected worldwide population and the dramatic decrease in the cost of PCs and other Internet access devices, such as cell phones and smartphones.

Although this equipment utilizes a broad spectrum of connector and cable assemblies types, PCB connectors, I/O connectors, RF, telecom and fiber optic connectors tend to dominate this sector. Most of Nicomatic products applicable to telecom/datacom comprise custom made solutions, DMM Micro-D Mix connectors & CMM micro-connectors, Our applications include telecom infrastructures such as solar stations, telecom equipments and sub-systems, and remote communication systems.
